 root@www:~#
 mysql
 Welcome to the MariaDB monitor. Commands end with; or \g.
 Your MariaDB connection id is 37
 Server version: 10.6.7-MariaDB-2ubuntu1 Ubuntu 22.04
 Copyright (c) 2000, 2018, Oracle, MariaDB Corporation Ab and others.
 Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.
 MariaDB [(none)]> create database wordpress;
https://www.server-world.info/en/note?os=Ubuntu_22.04&p=httpd2&f=2
```

```
Query OK, 1 row affected (0.00 sec)
\label{lem:mariaDB mariaDB mariaDB mariaDB mariaDB [(none)]} grant all privileges on wordpress.* to wordpress@'localhost' identified by 'password'; and the privileges on wordpress on wordpress. The wordpress of the privileges on wordpress of wordpress on wordpress of wordpress on wordpress of wordpres
Query OK, 0 rows affected (0.00 sec)
MariaDB [(none)]> exit
Bye
[5] Configure Apache2 for WordPress.
root@www:~#
 wget https://wordpress.org/latest.tar.gz
root@www:~#
tar zxvf latest.tar.gz -C /var/www/
root@www:~#
chown -R www-data. /var/www/wordpress
 root@www:~#
vi /etc/apache2/conf-available/wordpress.conf
# create new
Timeout 600
ProxyTimeout 600
Alias /wordpress "/var/www/wordpress/"
DirectoryIndex index.php index.html index.htm
 <Directory "/var/www/wordpress">
             Options FollowSymLinks
             AllowOverride All
             Require all granted
             <FilesMatch \.(php|phar)$>
                          SetHandler "proxy:unix:/var/run/php/php8.1-fpm.sock|fcgi://localhost/"
              </FilesMatch>
 </Directory>
root@www:~#
a2enconf wordpress
Enabling conf wordpress.
 To activate the new configuration, you need to run:
       systemctl reload apache2
 root@www:~#
systemctl reload apache2
```

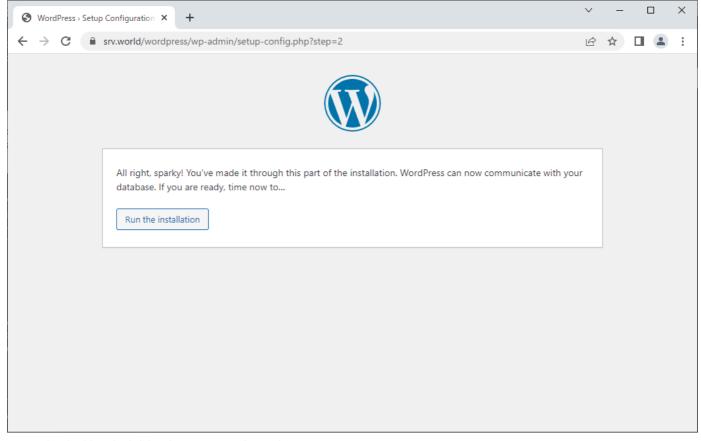

[6] Access to the URL [https://(Server's Hostname or IP address)/wordpress/] with Web browser on any Client, then following screen is displayed. Click [Let's go!] button.

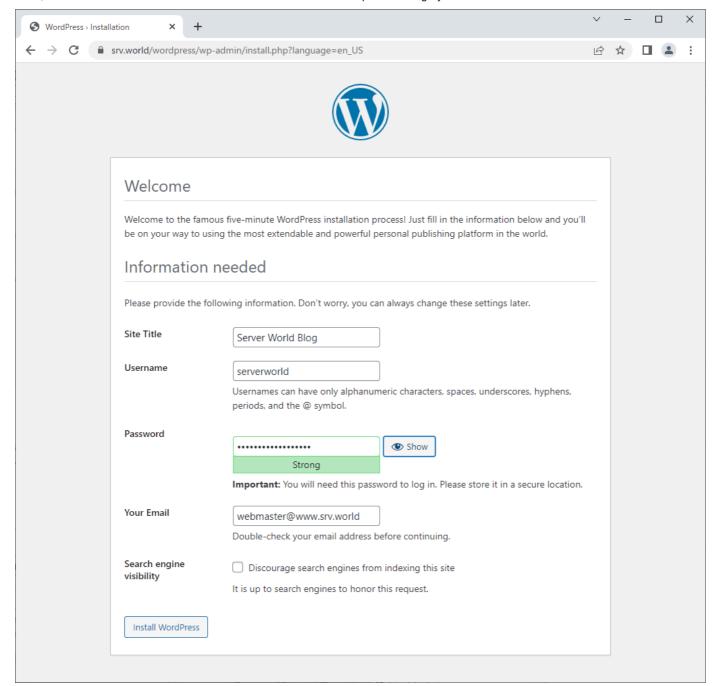

[7] Configure Database connection information. Specify MariaDB user and database you added on [4].

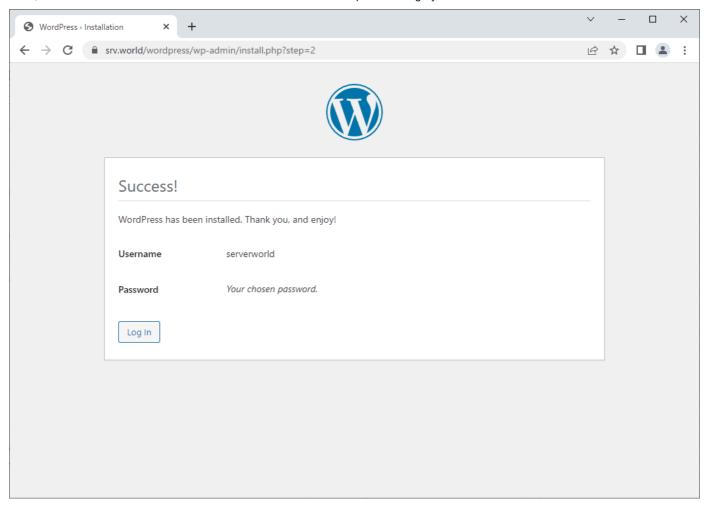

[8] Click the [Run the installation] button.

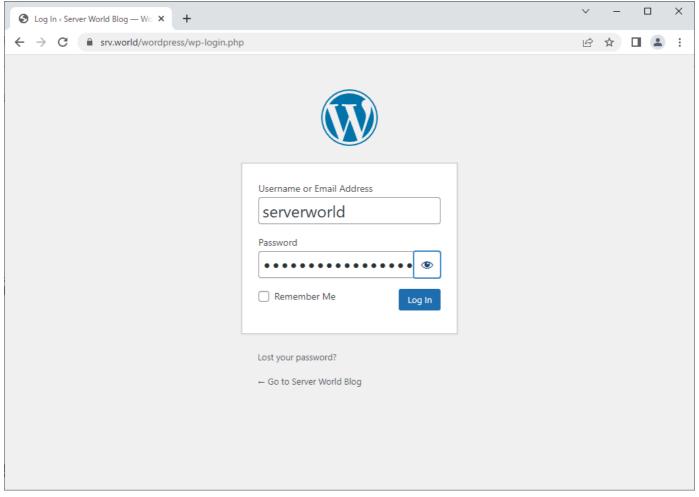

[9] Set Blog site title and Administrative user account for WordPress.

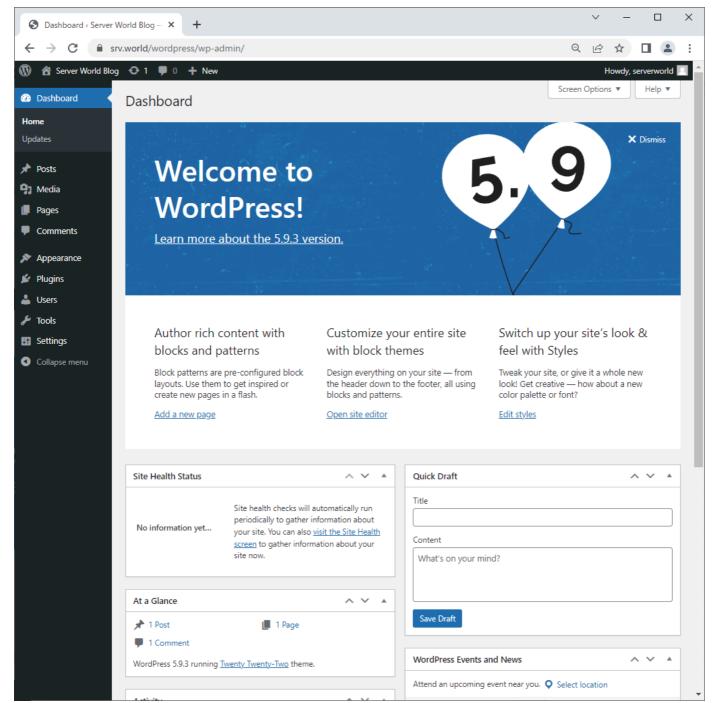

[10] That's OK if [Success!] is displayed like follows. Click the [Log in] button.

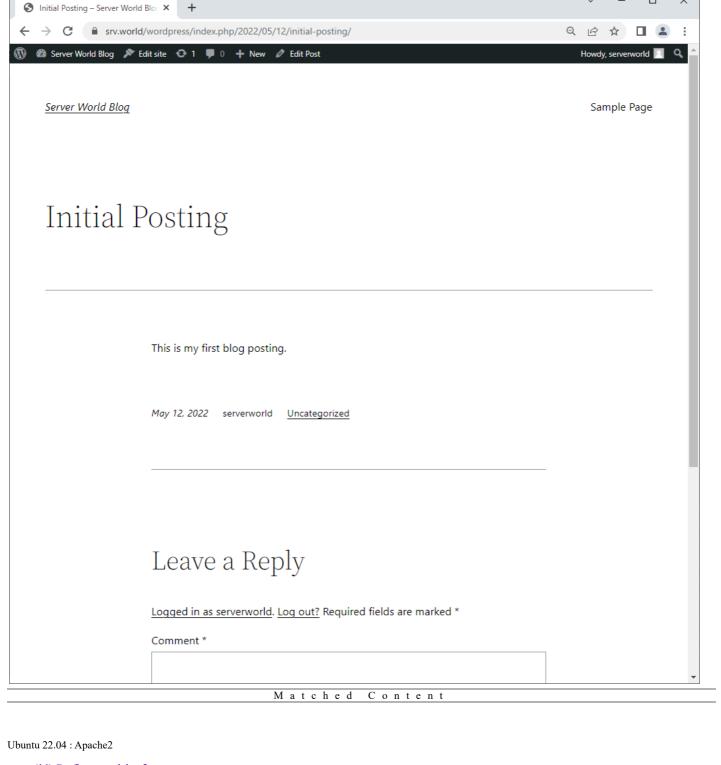

[11] Login with the administrative user you added in [9].

[12] This is the WordPress management site. You can add daily posts and other many tasks on here.

[13] For Blog's top page, it's [(your server's hostname or IP address)/wordpress/]. Try to add a post to verify working normally.

- (16) Configure mod http2
- (17) Configure mod_evasive
- (18) Log Report : AWStats
- (19) Blog System : WordPress
- (20) Web Mail: RoundCube
